

DIAMOND WALL

\$DWALL

Strong Hands. Real Yield.

Real-Yield DeFi Platform on BNB Smart Chain

PITCH DECK • v1.0 • August 2026

The DeFi Yield Problem

Why most projects collapse

90%

of DeFi projects launched in 2021-2025 have failed or lost >95% of value

Recurring failure patterns:

Inflationary yield paid by minting new tokens

Ponzi-style economics: new investors pay old ones

Opaque tokenomics with hidden VC allocations

Marketing over product, unaudited contracts

Excessive founder control, no timelocks

The DiamondWall Solution

Every promise verifiable on-chain. Every mechanism auditable by any third party.

01

Real Yield

Rewards funded by actual protocol revenue — not by minting new tokens.

02

Total Transparency

Every contract verified on BscScan. Every marketing payment on-chain with mandatory justification.

03

Security First

CertiK Skynet 86.27/100, OpenZeppelin v5, 48h timelocks, 458+ automated tests.

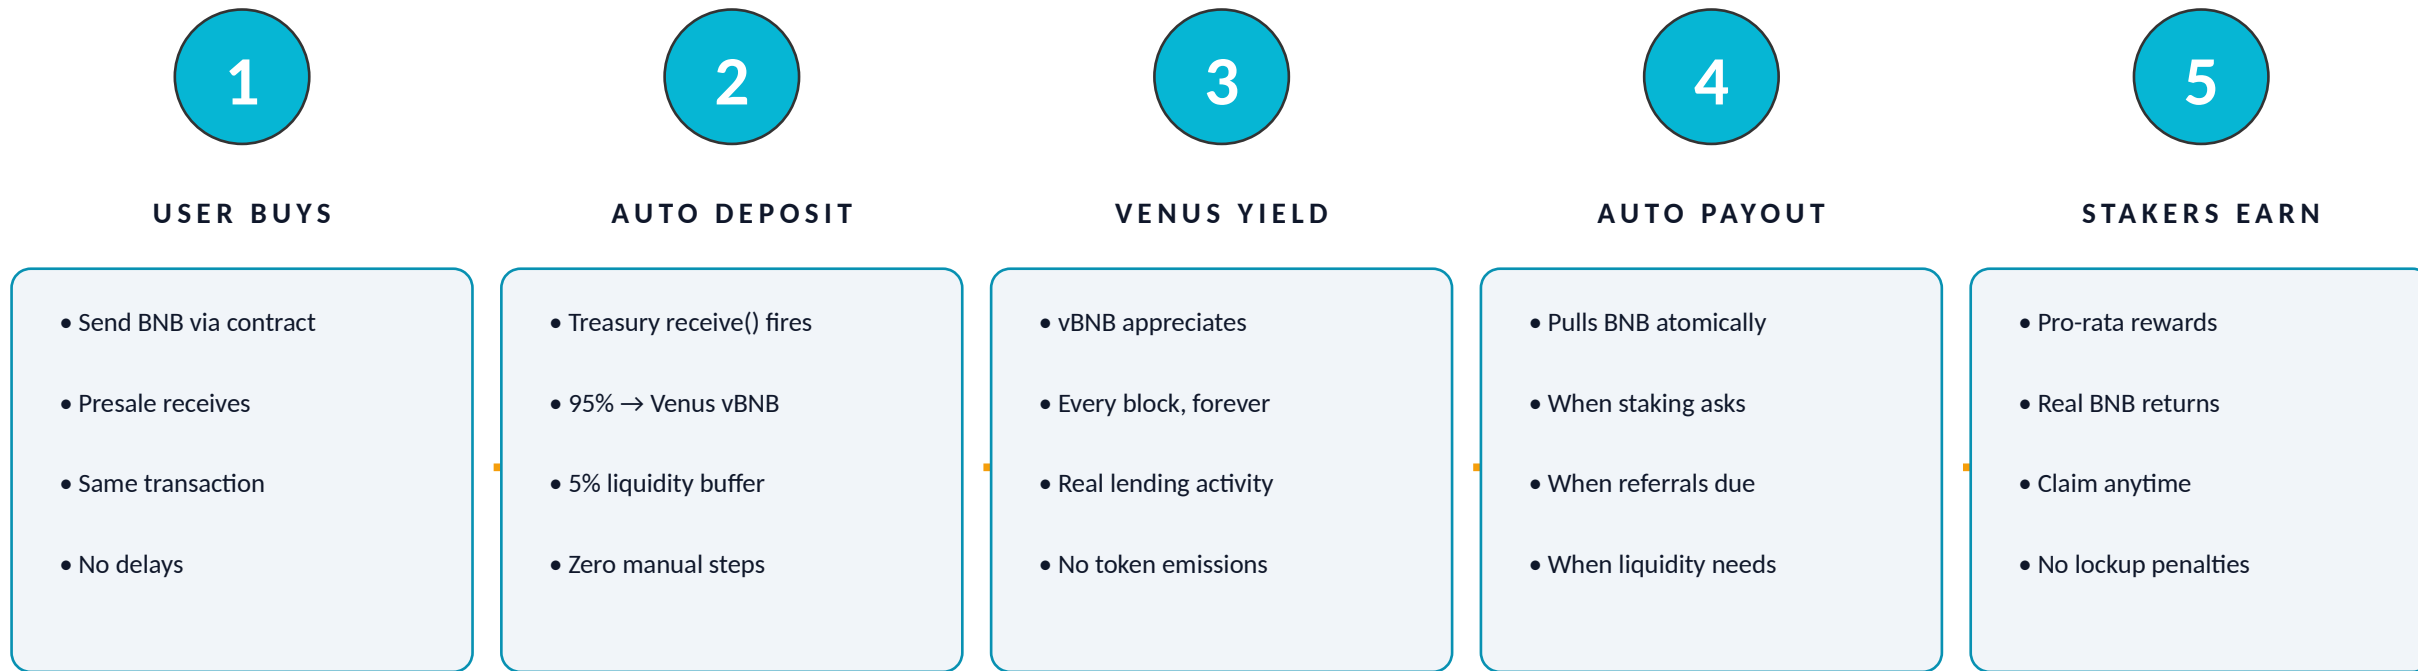

04

Zero Dilution

Fixed 1B supply. No mint function. Ever. 0% buy/sell tax.

How Real Yield Works

Fully automated — Venus Protocol is the engine

"Once deployed, DiamondWall runs itself. The owner starts the engine — the code does the rest."

Powered by Venus Protocol

Linear vesting from DEX open

HOW IT WORKS

- 1 User claims one of the 100 available codes
- 2 Buyer uses code during presale purchase
- 3 5% commission credited to code owner in DWALL
- 4 Commission vests 25% per month over 4 months
- 5 Vesting starts on DEX opening — not before
- 6 Anti-self-referral logic enforced on-chain
